

I support the segregation of the CW/data modes from the single-sideband and other wider-bandwidth modes proposed in this proceeding. Voluntary compliance with voluntary "band plans" does not appear to be satisfactory up till the present. As the 160-meter band fills with more and more occupants, the need to have different frequency segments (as is mandated by FCC Regulations for all other amateur bands) will become even more severe.

Yours truly,

R. Dean Straw, N6BV
